Duro-Last®, Inc. Earns Highest Level of Sustainability Certification for Single-Ply Roofing Membranes

SAGINAW, MICHIGAN – Duro-Last is pleased to announce that it has achieved platinum certification under the NSF American National Standard for Sustainable Roofing Membranes - NSF/ANSI 347. Certified by UL, this standard represents that Duro-Last manufactures a product that is third-party verified as sustainable, durable, and high performing. The certification applies to 40, 50 and 60 mil, white, tan, gray and dark gray as well as 50 mil terra cotta Duro-Last membranes.

Duro-Last is only the second manufacturer to obtain the platinum level of certification. With the company's Duro-Tuff®, Duro-Fleece® and Duro-Last® EV membranes having gold certification for NSF/ANSI 347, Duro-Last has the most product lines certified in the industry.

“Duro-Last was excited to have most of our membrane product lines certified by this third-party standard,” said Jason Tunney, Executive Vice President and General Counsel of Duro-Last. “But we wanted to take it to the next level and achieve the highest rating possible.”

NSF/ANSI 347 was written by NSF International and, according to their website, is based on life-cycle assessment principles. NSF/ANSI 347 employs an easy-to-use point system to evaluate roofing membrane products against established prerequisite requirements, performance criteria and quantifiable metrics in five key areas:

1. Product design
2. Product manufacturing
3. Membrane durability

4. Corporate governance
5. Innovation

Obtaining this certification will help the Duro-Last membrane meet the market demand for products that comply with green building standards like the Green Building Initiative's Green Globes. Product specifiers and purchasers are under pressure to find products that meet their sustainability criteria, and having the NSF 347 certification can give them the peace of mind of specifying a third-party verified product.

This certification is one more step in Duro-Last's commitment to sustainability and transparency, coming after the announcement of the publication of Environmental Product Declarations (EPDs) for Duro-Tuff, Duro-Fleece and Duro-Last EV membranes. Duro-Last is the only roofing manufacturer to offer EPDs for single-ply roofing membranes. To read more about Duro-Last's sustainability efforts, visit www.duro-last.com/sustainability.

"There's a lot of talk in the roofing industry about being 'green' and sustainable," said Katie Chapman, Duro-Last Corporate Sustainability Specialist. "At Duro-Last we want to help people make informed decisions when purchasing roofing products."

About Duro-Last® , Inc.

Known as the "World's Best Roof®", Duro-Last®, Inc. is the world's largest manufacturer of custom prefabricated, thermoplastic single-ply roofing systems. Factory controlled custom prefabrication eliminates up to 85% of field seams, resulting in lower on-site labor costs and easier installation. This highly sustainable and extremely durable roofing system is leak-proof, virtually maintenance-free and resistant to chemicals, fire, punctures, and high winds. Over two billion square feet of Duro-Last membrane has been installed throughout North America. Duro-Last is headquartered in Saginaw, Michigan with additional manufacturing facilities in Carrollton, Texas; Grants Pass, Oregon; Jackson, Mississippi; and Sigourney, Iowa. For more information on Duro-Last, call 800-248-0280 or visit www.duro-last.com.
