

Cost-effective solutions with Duro-Tuff:

The Duro-Tuff Membrane provides a cost-effective roll good solution, offering the membrane characteristics for which Duro-Last® is known. Available in rolls of 50, 60 or 80 mil thicknesses, Duro-Tuff features a variety of color options and a complete line of custom-fabricated accessories to complement and enhance installation efficiencies of the roofing system. Additionally, Duro-Tuff membrane is available in 10' wide rolls, further reducing rooftop seaming compared to traditional roll good membranes.

Duro-Tuff roll goods can be applied using a variety of methods:

- Duro-Bond® Induction Welding: A non-penetrating technology which bonds the membrane to a specialty-coated fastening plate.
- Adhered: Duro-Last offers several adhesive options for applying the roof membrane to the deck surface.
- Mechanical Attachment: Fasteners and plates are used to securely attach sections of membrane to the roof deck.

Precision-Fabricated Accessories:

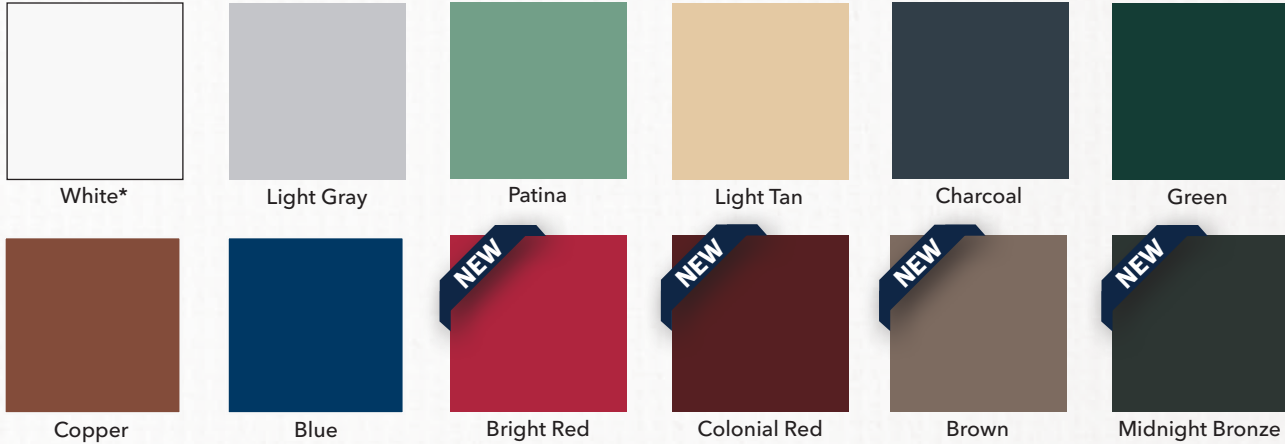

Duro-Tuff has its own complete line of compatible custom-fabricated flashings, skirted edge metal made by EXCEPTIONAL® Metals and other roofing system components. Custom-fabricated flashings are manufactured with Duro-Last membrane material and feature a weft-inserted scrim which provides puncture and tear resistance along with tensile strength at transitions - the most critical areas of any roof installation.

Comprehensive Warranty Coverage:

Multiple warranty options for Duro-Tuff installations are available, including our Basic, Ultra, and Residential warranties. Duro-Tuff warranties are also available for installations in high-wind areas. Consequential damage coverage will not be offered for Duro-Tuff installations.
