♦ Available at additional cost.

### Galvalume® Plus

Duro-Last® offers a mill finished Galvalume® with a two-sided, clear chromate/ acrylic finish that simultaneously aids roll forming without the use of lubricants and eliminates unsightly handprints or stains resulting from handling and storage. The acrylic finish dissolves naturally over a period of time, and when left as is, allows for natural and even weathering.

### Our Metal Products Are Environmentally-Friendly

Duro-Last products utilize metals with either Kynar 500® or Hylar 5000® resins, which provide superior color retention. Products made by Duro-Last are 100% recyclable.

### Warranty

EXCEPTIONAL Metals offers a finish and substrate warranty. Coating warranty varies for Brite Red, Coal Black, Copper Metallic, and Silver Metallic. Metallics are warranted for chip, crack, and peel only.

Oil canning is an aesthetic issue and is an inherent part of light gauge cold formed metal products. By using coil that has been processed properly, designing for thermal movement, following stringent specifications for installation and proper handling most oil canning can be eliminated. Oil canning is not grounds for coil/panel rejection.

Colors shown represent the actual color as closely as possible. To ensure exact color for final approval, a metal color chip is available.
