Duro-Last® Expands Roofing Solutions with Duro-Last EV 80 Mil and Duro-Last EV Fleece Membranes

SAGINAW, Mich. – Duro-Last is proud to announce the expansion of its EV membrane solutions with the addition of Duro-Last EV 80 mil and Duro-Last EV Fleece. Duro-Last EV is a Ketone Ethylene Ester (KEE) containing membrane utilizing Elvaloy™ from Dow. Offering superior flexibility and weldability in low temperatures, Duro-Last EV is available in 50, 60 and now 80 mil thickness options.

Further expanding EV membrane options, Duro-Last EV Fleece combines high-quality fleece material on the underside of the membrane with the proven performance of the Duro-Last EV roofing membrane. Compatible with a wide variety of substrates, Duro-Last EV Fleece is an ideal solution for adhered and mechanically fastened low-slope roofing projects requiring a long lasting, energy efficient membrane. Duro-Last EV Fleece is available in 60 and 80 mil thicknesses.

“Duro-Last continually strives to provide industry-leading solutions for the complex needs of the roofing industry,” Duro-Last Senior Vice President of Sales Operations Steve Ruth said. “The expansion of our EV membrane products is a direct response to the growing demand for roofing systems specifically designed to withstand harsh climate extremes. As industry needs continue to evolve, Duro-Last will be prepared with a solution and that is something we take great pride in.”
